## ACADEMIC SERVICE

Reviewer for ICRA 2026, CVPR 2025 Robo-3DVLM

## RESEARCH PROJECTS

**Multi-skill In-Context Imitation Learning from Human Videos (Ongoing)**

Advisor: Dr. Weiyu Liu, Postdoc, Stanford, CS; incoming Prof., University of Utah

May 2025 – Present

- Training and evaluating a video-conditioned Diffusion Policy for assembly tasks within Isaac Gym
- Created a dataset of long-horizon furniture assembly using FurnitureBench, Isaac Gym, and LeRobot

**Manual2Skill++: Connector-Aware General Robotic Assembly from Instruction Manuals via Vision–Language Models**

Advisor: Prof. Lin Shao, Assistant Professor, NUS, CS

Apr 2025 – Sept 2025

- Developed a novel dataset representing connector placements (e.g., screws, nails) for 21 assembly objects using Blender, converting manual illustrations into an Assembly Graph representation for connector-aware assembly
- Proposed a benchmark for automatic extraction of connector placements and graph generation from manuals

## Improving Point-Cloud Forecasting Accuracy, CS Project Course

Advisor: Prof. Florian Shkurti, Assistant Professor, UofT, CS

May 2025 – Aug 2025

- Developed an end-to-end model that integrates multi-view RGB images with temporal LIDAR scans to improve future point cloud forecasting on the NuScenes dataset

## SAFE: Multitask Failure Estimation for Vision-Language-Action Models

Advisor: Prof. Florian Shkurti, Assistant Professor, UofT, CS

May 2024 – May 2025

- Performed ablation studies on input representations (DINO & CLIP features vs. VLA’s final layer embeddings) for training and evaluating the failure estimation module
- Developed a PyTorch & SimplifierEnv pipeline to fine-tune VLAs on mixed datasets from OXE with SLURM

## Manual2Skill: Learning to Read Manuals and Acquire Robotic Skills for Furniture Assembly Using Vision-Language Model

Advisor: Prof. Lin Shao, Assistant Professor, NUS, CS

Oct 2024 – Feb 2025

- Employed VLMs to generate high-level furniture assembly plans from IKEA manuals, achieving generalization across diverse furniture types and exceeding previous baselines by over 300%.
- Generated 10,000+ furniture parts via a novel, automated Blender pipeline to simulate realistic assembly scenes

## RESEARCH INTERESTS

---

My research spans **Robotics** and **3D Vision** to enable **generalizable robot manipulation**. I aim to develop systems that execute complex, long-horizon tasks from simple instructions (e.g., “prepare a dish from this cookbook”) by learning from existing human knowledge with foundation models, rather than collecting data from scratch.
